Installing MongoDB on Ubuntu 18.04 VM in CloudStack

Step 1: First, update the packages list to have the most recent version of the repository listings with command sudo apt update.

Step 2: Install the MongoDB package itself:

```
ubuntu@ubuntu-CloudStack-KVM-Hypervisor:~$ sudo apt install -y mongodb
Reading package lists... Done
Building dependency tree
Reading state information... Done
```

This command installs several packages containing the latest stable version of MongoDB, along with helpful management tools for the MongoDB server.

Step 3: Check if it worked:

According to systemd, the MongoDB server is up and running.

Step 4: Connect to MongoDB with command mongo

```
ubuntu@ubuntu-CloudStack-KVM-Hypervisor: -$ mongo
MongoDB shell version v3.6.3
connecting to: mongodb://127.0.0.1:27017
MongoDB server version: 3.6.3
Welcome to the MongoDB shell.
For interactive help, type "help".
For more comprehensive documentation, see
        http://docs.mongodb.org/

        http://groups.google.com/group/mongodb-user
Server has startup warnings:
2020-03-03T18:31:01.055-0700 I STORAGE [initandlisten]
2020-03-03T18:31:01.055-0700 I STORAGE [initandlisten] ** WARNING: Using the XFS filesystem is str
ongly recommended with the WiredTiger storage engine
2020-03-03T18:31:01.055-0700 I STORAGE [initandlisten] **
                                                                       See http://dochub.mongodb.org/c
ore/prodnotes-filesystem
2020-03-03T18:31:02.191-0700 I CONTROL [initandlisten]
2020-03-03T18:31:02.191-0700 I CONTROL [initandlisten] ** WARNING: Access control is not enabled f
or the database.
2020-03-03T18:31:02.191-0700 I CONTROL [initandlisten] **
                                                                       Read and write access to data a
nd configuration is unrestricted.
2020-03-03T18:31:02.191-0700 I CONTROL [initandlisten]
> use admin
switched to db admin
```

Now mongoDB is ready for queries.
